

We are excited to announce we now carry **Tattered Angels Glimmer Mist**

To help you enjoy this innovative new product, here are some helpful tips. Happy creating!
How to Use:

What is Glimmer Mist? Glimmer Mist, a Tattered Angels original product, is a quick and easy spray that delivers just a touch of glimmer in a fine mist to make all of your projects shine. Glimmer Mist puts an end to messy, clumpy, and time consuming conventional glitters with over 80 colors to choose from so finding the right one for your project is easy. Glimmer Mist was made by a scrap booker with the scrap booker in mind and is water-based, archival safe, acid-free, and non-toxic. Glimmer Mist is safe for and adheres to all types of materials including paper, acrylic, metal, and fabric. Note: due to variations in the manufacturing processes of the raw materials used in the production of Glimmer Mist color lots may vary slightly.

For a light, evenly misted look hold Glimmer Mist away from your project, and spray, such as you would when applying hairspray.

1. For a thicker, raindrop application hold Glimmer Mist closer to your project while spraying. Do not move the sprayer too much, or too fast.
2. For a pooling effect, which gives intense color, spray Glimmer Mist very closely and directly on your project.

You can let Glimmer Mist air dry or use a heating tool to speed up the drying process.

Please note that while Glimmer Mist is attractive when just using one color, layering multiple colors also adds a beautiful richness to your projects.

Some of our Favorite Places to Use Glimmer Mist:

- Dries instantly on wood
- Looks fabulous on chipboard and paper
- Sticks to metal and glass
- Pools on plastic to create a stained glass effect
- Makes your stickers shimmer
- “Pops” your fabric or paper flowers
- Adds a gorgeous sheen to lace, ribbon, twill and fabrics (will wash out!)
- Glimmer Mist applications are limited only by your creativity!

Commonly Asked Questions About Glimmer Mist

The sprayer dribbles:

When you spray, make sure your finger is not hanging over the front edge of the sprayer. When the Glimmer Mist disburses it will hit your finger and dribble back down onto the rim of the sprayer. The next time you shake it or tip it, it will dribble out. If your finger is pulled back the Glimmer Mist will spray out in the pattern it was intended to and it won't go back onto the cap.

The sprayer gets clogged:

To prevent it getting clogged - make sure you shake all the bottles of Glimmer Mist really well before you spray it. The Glimmer part settles as the bottom and if the bottle isn't shaken really well the sprayer will suck up too much glimmer for the sprayer to handle.

To clear out the sprayer - take off sprayer top, put canned air (without the spray straw) directly on sprayer opening. Apply canned air in short spurts 1-3 times until clear.

You don't like the Spray Pattern:

You want a fine mist – Push the sprayer down quickly and move it across the surface of your project like you're applying hairspray. You want to keep your hand moving quickly and evenly across your project. Bear in mind the nature of the product is that it may take you several tries to a completely even spray pattern. Practice spray before you do your final project.

You want a “splotchy” look – Push sprayer down halfway while aiming at your project. Don't move the sprayer too much or too fast.

The paper is curling:

Glimmer Mist is a water-based spray that can make lightweight mediums (like tags and paper) curl as it dries. There are a number of ways you can correct this:

- Use a heat tool on both sides of your paper
- Iron your paper
- After it's dry, place a heavy object on it for a few minutes

Will it stain my hands and/or clothes?

As with any arts and crafts project, messes happen. Glimmer Mist will come out of your clothes in almost all circumstances. It may take a couple of washings so make sure you check before you put it in the dryer. Glimmer Mist on your hands comes off best with shampoo – so once you're out of the shower it should be gone! It will also come off with several washings from soap.

Will it fade in the sun?

Yes! Glimmer Mist will fade if left in the sun. You may be able to resist fading if you use a UV protective coating over your project.

Is Glimmer Mist water resistant?

No, Glimmer Mist is water based and does not use pigment dye. Therefore, it will run if exposed to moisture. If you're planning on using Glimmer Mist in a humid environment (bathroom décor, for example) put a protective coating over it.

My stamped images get blurry after being sprayed:

There are two ways to use Glimmer Mist with stamped images. If you're using archival ink, you can spray Glimmer Mist on top of your stamped image and it won't run. If you don't use archival ink, spray the Glimmer Mist first and stamp your image when it's dry.
